

RSA® ARCHER® CONTROLS MONITORING PROGRAM MANAGEMENT

Use Case for Regulatory & Corporate Compliance Management

The Challenge

In today's complex regulatory environment, organizations face a daunting task in maintaining compliance amidst constantly shifting obligations and requirements. Ad hoc, disconnected compliance activities are often implemented reactively across separate areas of the business, which severely limits the aggregated view of risk and compliance impacts. Efficiency and scale also quickly suffer as the volume of manual systems and processes overloads the organization's limited resources.

The inevitable outcome is a hit to the organization's productivity as employees divert increasing amounts of time away from strategic activities in order to respond to compliance requests. Another real threat to the organization stems from inconsistently testing technology control environments both internally and throughout the supply chain, which results in the inability to identify inherent and residual compliance risk.

Overview

RSA® Archer® Controls Monitoring Program Management builds upon the foundation established with RSA Archer Controls Assurance Program Management to build and manage separate compliance projects. This includes tools to assess and report on the performance of controls across all enterprise asset levels and the ability to automate control assessments and monitoring continuously.

With RSA Archer Controls Monitoring Program Management, multiple compliance projects can be managed in concert with other strategic business activities. By consolidating organizational compliance projects into a single platform, business owners will have visibility into critical risk and compliance data enabling them to make fully informed risk based business decisions in support of organizational priorities. A single control universe can further align with extended corporate stewardship and responsibility goals and other strategic objectives.

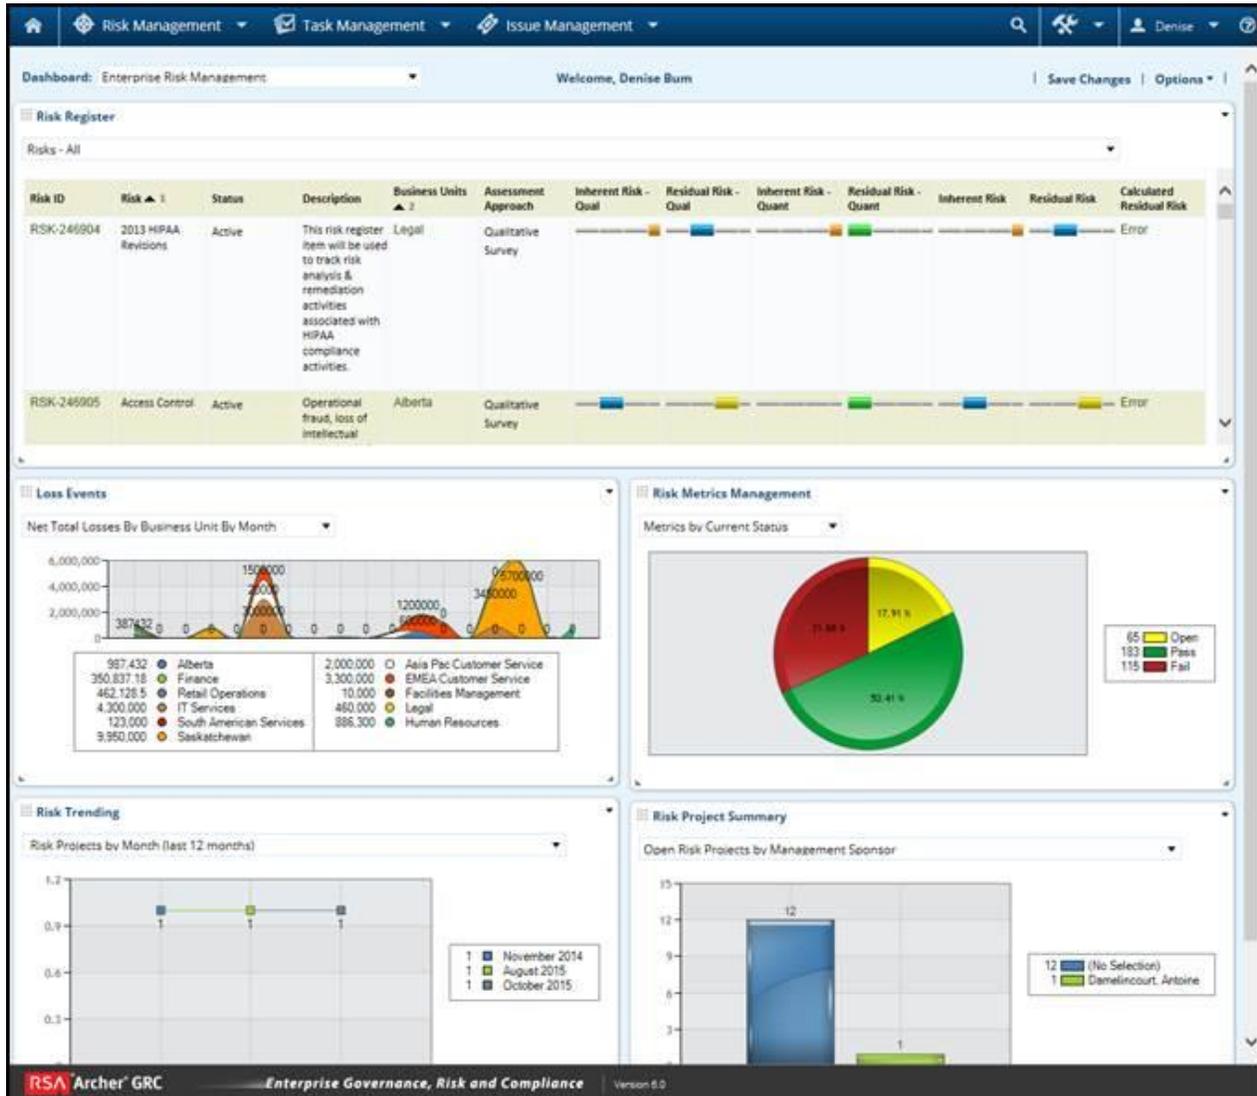

Key Features

- Centralized system to catalog all business and technology infrastructure assets
- Standardized approach to measuring risk and control performance
- Control and technical configuration libraries connected to risk and compliance obligations
- Integration with testing and assessment technologies

Key Benefits

With RSA Archer Controls Monitoring Program Management, you will see:

- Increased compliance coverage with reduced effort
- Decreased time to detect, identify root cause and remediate compliance issues
- Gain in management confidence level relative to emerging strategic and regulatory risk
- Transitions from manual to automated controls testing
- Minimized one-off compliance activities
