DATA SHEET

RSA ARCHER® STRATEGY ROADMAP

LEVERAGE A PRIORITIZED APPROACH FOR YOUR ORGANIZATION’S LONG-TERM SUCCESS
OVERVIEW

Building a sustainable enterprise risk management program, you require a solid roadmap for communicating goals and aligning business processes across your organization. As you formulate your approach, take advantage of the RSA Archer® Strategy Roadmap service to help you assess the current state of your program maturity, identify opportunities for growth and define your vision for a world-class program.

The RSA Archer Professional Services team collaborates with stakeholders across your organization to understand current business processes, path points, workflow and dependencies. RSA experts can then recommend a prioritized approach to implementing RSA Archer solutions that allows you to maximize both short- and long-term value from your Archer solutions.

With a Strategy Roadmap document and application as the final project deliverables, you will be well-equipped to implement a phased program, monitor project milestones, communicate status to senior management and modify your strategy as business requirements evolve.

KEY BENEFITS

The Strategy Roadmap approach allows your organization to get all stakeholders involved in the process and buy into the idea of Integrated Risk Management. It flushes out dependencies and redundancies—leading to more automation and cost savings.

The Strategy Roadmap service is useful not only for organizations that are new to the approach but also for those with longstanding programs. Companies in all phases of their maturity journey find value in using a Strategy Roadmap to gauge the effectiveness of their initiatives and chart future phases of work.

STRATEGY ROADMAP PROCESS

RSA Archer Professional Services certified consultants will take you through a six-phase process that includes planning, discovery, analysis, architecture, scheduling and publishing.

Planning

The planning phase starts with conducting an introductory scoping and planning call, followed by identification of executive sponsor and key stakeholders, determination of the number of processes to be evaluated, and definition of the project vision, goal and objectives.

Discovery

During the discovery phase, the RSA Archer Professional Services team interviews business process owners and subject matter experts, documents current governance, risk management and compliance processes, conducts solution demonstrations, and develops prototypes.
Analysis
Analysis includes analysis of current-state processes, identification of dependencies, complexity and priorities, and recommendations for automation and systemization opportunities.

Architecture
RSA Archer consultants define the proposed solution architecture, based on process analyses. They also illustrate application dependencies, integrations and software licensing requirements in relational diagrams.

Scheduling
The team determines the project approach and timeline with a Gantt chart, based on priorities and process readiness. During this phase, RSA Archer consultants identify and confirm the appropriate project resources and discuss project schedules with the client project manager.

Publishing
In the publishing phase, the RSA Archer team reviews the Strategy Roadmap document and application to facilitate executive-level discussion. RSA expert consultants monitor ongoing progress within the Strategy Roadmap application during this phase.
