As successful companies expand into new markets and increase their presence across their sector and the globe, their success breeds new challenges in maintaining the critical security of their most valued assets. The dynamic nature of companies’ expanding workforces adds a level of complexity to employee access to key resources. Frictionless access that increases productivity, while maintaining critical country-specific compliance and data standards, becomes onerous as complexities increase. Ensuring access to critical resources through multiple access modalities, while employees work remotely and uniquely across geographies and cultural circumstances, creates challenges that test the capacity of a security department’s abilities to ensure identity/access standards are established, corporate and consumer privacy regulations are followed, data residency restrictions are ensured, and systems are managed and maintained in support of multiple endpoints (smartphones, smartwatches, desktops/laptops and tablets) used by the dynamic workforce of today.

The RSA Risk Framework for Dynamic Workforce helps organizations assess and improve their maturity across the following management domains: Governance, Identity, Privacy, Data and Systems. For each of these areas, RSA will apply its proprietary Cyber Maturity Quantification Tool that produces a profile of an enterprise’s maturity in Dynamic Workforce Management, as well as an aspirational profile (long-term goal of third-party governance maturity status across the risk-management lifecycle). The comparison between current and aspirational states produces a gap analysis that can help organizations prioritize areas for improvement.
As with all RSA Risk Maturity Frameworks, the Cyber Risk Practice helps enterprises to assess their current readiness for managing risk with an approach that crosses an organization’s traditional functional boundaries, using a maturity model that assumes the perspective of the CEO, COO, CCO, CIO and other senior executives.

The RSA Cyber Dynamic Workforce Maturity Assessment provides the following:
• Interviews and documentation with key business stakeholders to deeply understand business goals, objectives, risk tolerance and existing risk posture
• Administration of the RSA proprietary Cyber Maturity Quantification Tool to baseline risk maturity across the enterprise’s usage of multiple endpoints
• Development of a gap analysis and roadmap that can be utilized to close existing gaps and move to a desired level of cyber risk-management maturity

ABOUT RSA GLOBAL SERVICES
The RSA Global Services team of 650 cybersecurity business advisory and technical consultants operates in more than 100 countries, and earned the “Strong Performer” rating in the Forrester Wave™ for Digital Forensics and Incident Response Service Providers.1 With over thousands of engagements, RSA Global Services has helped secure many types of organizations, often designing and implementing comprehensive risk and security management programs.

RSA Global Services combines deep business advisory and security skills and broad risk-management knowledge to help the organization to assess and improve its dynamic workforce maturity status. Within the RSA Risk and Cybersecurity Practice, three groups provide critical security services:
• RSA Risk and Cybersecurity Advisory Practice (RCAP) delivers business-driven cybersecurity services focused on core business analysis, business impact assessment and cyber risk maturity assessment in the areas of cyber incident management, third-party management, dynamic workforce management and multi-cloud management.
• RSA Advanced Cyber Defense (ACD) delivers services to assess breach readiness, security operations center (SOC) or cyber incident response team (CIRT) assessment and design, incident response planning and testing, and “Expert On-Demand” services.
• RSA Incident Response (IR) helps customers design, manage and perform incident response functions via both proactive and reactive services. Available on a retainer or ad hoc basis, RSA IR extends the organization’s security skills to deal with security incidents of all types and severities.

ABOUT RSA
RSA® Business-Driven Security™ solutions provide organizations with a unified approach to managing digital risk that hinges on integrated visibility, automated insights and coordinated actions. With solutions for rapid detection and response, user access control, consumer fraud protection, and integrated risk management, RSA customers can thrive and continuously adapt to transformational change.
