

Minimize Your New & Emerging Business Risks

When a major crisis strikes, the disruption it creates has immediate and lasting impacts on organizations' workforces, security operations and business continuity programs. **Here are three immediate and longer-term challenges that crisis events create and ways RSA can help you address them.**

Challenge 1: Workforce Transformation

What happens when employees can't commute to the office, travel for business or work on site? **RSA SecurID Suite** can help you quickly stand up a secure remote workforce.

Multi-Factor Authentication

RSA SecurID Access helps to ensure that all the remote users accessing your VPN, cloud-based and on-premises systems are who they say they are.

Identity Governance & Lifecycle Management

RSA Identity Governance and Lifecycle gives you visibility into and control over user access and entitlements, automates provisioning and deprovisioning, and ensures compliance.

CONSIDERATIONS FOR SECURITY & RISK

Physical site impacts

Mobile comms

Secure remote access

Challenge 2: Security Transformation

How do you manage security operations when everyone is remote? Do your policies and procedures assume your critical response teams are all working from a single location? And are you prepared for the influx of phishing emails and other forms of fraud that cybercriminals are perpetrating to prey on remote workers and consumers?

Remote SOC

RSA NetWitness Platform provides security teams with visibility across endpoints, the network and the cloud. When your security team is geographically dispersed, you need a single, unified platform, not multiple disparate tools.

Threat Management Service

RSA FraudAction is a single, external threat management service that provides 24x7 detection and mitigation of online threats including phishing, Trojans, rogue mobile apps and rogue social media pages.

CONSIDERATIONS FOR SECURITY & RISK

Expanded attack surface

Network & endpoint visibility

Fraud detection

Incident Response

Challenge 3: Business Continuity

What do you do when the harsh realities of a crisis upend your existing business continuity and recovery plans?

Business Resiliency

RSA Archer Business Resiliency offers an automated approach to resiliency planning and recovery, allowing your organization to be prepared and respond swiftly in crisis situations to protect day-to-day operations.

Third-Party Risk

RSA Archer Third Party Governance enables your organization to efficiently manage your third-party ecosystem to understand and act on the related risks in an integrated manner. RSA brings together the intelligence, capabilities and business context to help you optimally manage your third-party risk.

CONSIDERATIONS FOR SECURITY & RISK

Assess/adjust BCM plans

Audit third parties

Compliance audits
