SOLUTION BRIEF

RSA Compliance Advisor

TURN REGULATORY REQUIREMENTS INTO GOVERNANCE ACTION.

The challenge

The regulatory landscape keeps expanding. New regulations and frameworks arrive, existing ones get revised, and each carries dozens to hundreds of individual requirements.

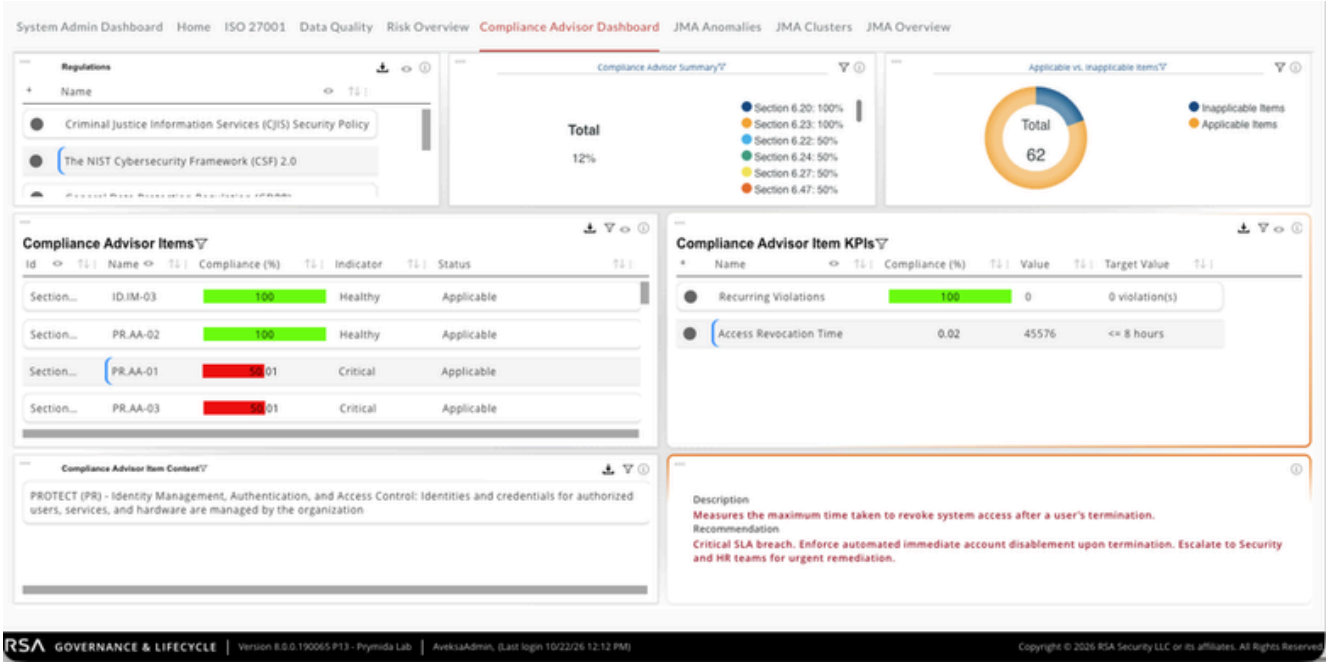

Translating that text into concrete identity governance activity takes a degree of specialized expertise that most organizations lack. Security and governance teams that are already stretched thin end up interpreting requirements manually, chasing evidence across systems, and building reports by hand. The result is compliance fatigue: high effort, slow answers, and limited confidence that the program reflects what regulations actually require.

The solution

RSA Compliance Advisor, part of **RSA® Governance & Lifecycle**, uses AI to translate regulatory requirements into the identity governance controls your organization already has in place. It measures your posture against each requirement, then points your team to the specific actions that close each gap. When a regulation is revised, RSA updates it in Compliance Advisor and the product remaps it to your controls automatically, so your team doesn't have to re-interpret the changes. You spend less time and money gathering evidence and generating reports, and get a clear view of where you stand and what to do next.

How it works

- **Requirement-level mapping**. AI reads a regulation's text and maps each requirement to the governance controls that satisfy it, including what falls outside identity governance's scope.
- **Continuous posture tracking**. A dashboard scores your posture against every mapped requirement and refreshes on the schedule you set, so gaps surface between reviews instead of at the next one.
- **Guided remediation**. When a requirement falls short, Compliance Advisor identifies the underperforming control and recommends the specific action to fix it.
- **Source-linked requirements**. Every mapped requirement links to the regulation's original text, so your team can verify each mapping against the source.

The Compliance Advisor dashboard shows posture for each regulation, from requirement-level compliance scores to the KPIs behind them and recommended remedies.

Supported regulations and frameworks

Compliance Advisor maps the following regulations and frameworks to the requirement level:

- General Data Protection Regulation (GDPR)
- Criminal Justice Information Services (CJIS) Security Policy
- Health Insurance Portability and Accountability Act (HIPAA)
- Protection of Personal Information Act (POPIA)
- National Institute of Standards and Technology Cybersecurity Framework (NIST CSF 2.0)

Support for the Digital Operational Resilience Act (DORA) and other regulations is planned for an upcoming release. RSA adds new regulations and frameworks on an ongoing basis.

Who it's for

- CISOs and IAM leaders: move from measuring compliance to actively improving it, with clear guidance on what to fix.
- Compliance and audit teams: reduce the time and cost of gathering evidence and generating reports, so scarce experts spend less time on manual work.
- Government agencies and financial institutions: keep pace with expanding regulatory obligations without depending solely on in-house regulatory expertise.

RSA Governance & Lifecycle

Compliance Advisor runs inside RSA Governance & Lifecycle, the RSA identity governance and administration solution. Request a demo from your RSA representative, or see it in action with a **free trial of RSA Governance & Lifecycle**.

The Compliance Advisor dashboard shows posture for each regulation, from requirement-level compliance scores to the KPIs behind them and recommended remedies.

About RSA

RSA is the identity standard for government agencies, finance, and high-assurance organizations. RSA provides the sovereign identity intelligence, authentication, access, governance, and lifecycle capabilities needed to secure all humans and agents. More than 9,000 security-first organizations trust RSA to manage more than 60 million identities across on-premises, hybrid, and multi-cloud environments.
