

SOLUTION BRIEF

RSA® ID Plus Identity Governance

Streamline access. Reduce risk. Eliminate manual processes.

Identity
Answers
to Us.

RSA ID Plus Identity Governance delivers lifecycle and access request capabilities directly within the ID Plus My Page experience. Part of [RSA ID Plus](#), the market's most secure identity and access management (IAM) platform, the solution's identity governance capability replaces manual, ticket-driven processes with a simple, automated approach that improves efficiency, strengthens control, and provides clear visibility into who has access to what across modern cloud and SaaS applications.

The problem with manual and ticket-driven access

Managing access through tickets and email does not scale, especially in environments with a growing number of cloud and SaaS applications. These manual operations create delays, increase the administrative burden, and introduce cybersecurity and compliance risks.

ID Plus Identity Governance addresses these challenges by embedding governance directly into the user experience. It makes it easy to request access, enforce approval workflows, and automate fulfillment without adding complexity.

Operate faster with greater control

ID Plus Identity Governance drives measurable improvements across both IT and the business. With ID Plus Identity Governance, IT teams spend less time managing access requests and chasing approvals, which frees them to focus on higher-value initiatives. Employees get timely access to the applications they need, which reduces delays and keeps work moving. At the same time, organizations strengthen control by applying consistent, policy-driven approvals across all access requests. With clear visibility into access across cloud and SaaS applications, teams can reduce risk and operate with greater confidence in their identity environment.

What you can do with ID Plus Identity Governance

- **Simplify access requests:** Give users a straightforward way to request application access directly through RSA My Page (SSO).
- **Eliminate tickets and email chains:** Replace manual processes with an automated access request workflow that improves speed and consistency.
- **Automate provisioning:** Reduce administrative effort by automatically fulfilling approved access requests.
- **Improve visibility:** Provide clear insight into who has access to which applications to support better decisions and stronger control.

Break Free from Ticket-Driven Access

Access should not depend on tickets, emails, and manual follow-ups, which slow down teams and introduce risks. ID Plus Identity Governance replaces manual processes with a modern, automated approach embedded directly in the RSA My Page experience.

What this means for your organization:

-  Eliminate delays caused by tickets and email
-  Enforce consistent, policy-driven decisions
-  Deliver access at the speed the business expects
-  Clarify who has access and why

Operate faster. Stay in control.

A simple, automated access experience

ID Plus Identity Governance integrates directly into the RSA My Page SSO experience to create a seamless lifecycle process. The capability delivers a single, streamlined experience from initial requests to fulfillment.

Lifecycle Access Request Experience

Users request access through a familiar interface in RSA My Page. Each request follows a defined approval workflow and once approved, is fulfilled automatically without manual effort.

Built to deliver control and efficiency

ID Plus Identity Governance helps organizations operate faster and with greater control. The capability improves a number of access functions, including:

- **Access Request Management:** Centralized, user-friendly access requests through RSA My Page
- **Approval Workflows:** Configurable approval processes to enforce policy and oversight
- **Automated Fulfillment:** Access provisioning across connected cloud and SaaS applications without manual effort
- **Visibility and Control:** Insights into access across applications to support governance and compliance

Part of the ID Plus experience

ID Plus Identity Governance extends the value of RSA ID Plus by embedding lifecycle and governance capabilities directly into the access experience. Organizations gain a more efficient, controlled, and user-friendly approach to managing identity without introducing additional tools or complexity.

From streamlined access to full identity governance

ID Plus Identity Governance simplifies and automates access management, helping organizations improve efficiency and visibility across their environment. For organizations with more advanced needs, including audit readiness and regulatory compliance, [RSA Governance & Lifecycle](#) delivers a full-featured identity governance and administration (IGA) solution built to support complex environments at scale.
